# Table of Contents

**Foreword xiii**
**Preface xv**

**Chapter 0 Where We Are – How We Got Here 1**

0.1 Computing in the 21st Century 1
0.2 Early Ideas 3
0.3 The World War II Era 4
0.4 Vannevar Bush and the Memex 6
0.5 Transistors, Chips and Moore's Law 7
0.6 Computing Grows Up 8
0.7 The Internet and the World Wide Web 10
0.8 Convergence 11
0.9 Systems and Architecture 11
0.10 The Importance of Standards 12
0.11 No Such Thing as a Free Lunch 13
0.12 Information Technology 14
0.13 Professionalism 14
0.14 Summary of Learning Objectives 15
0.15 References 16
0.16 Endnote 17

**Chapter 1 Representing Information 19**

1.1 Numbers as Abstractions 19
1.2 Positional Number Systems 20
1.3 Other Bases 21
1.4 Binary Numbers 22
1.4.1 Binary Integers 22
1.4.2 Why Binary? 24
1.4.3 Converting Decimal to Binary 24
1.4.4 Finite Precision Arithmetic – How High Can We Count? 25
1.4.5 Binary Arithmetic – Addition 26
1.4.6 Negative Numbers – Two's Complement 27
1.4.7 Binary Fractions 31
1.4.8 Hexadecimal Numbers as Shorthand 32
1.5 Very Large and Very Small Numbers 32
1.5.1 Scientific Notation 32

1.5.2 Floating-Point Numbers 33
1.5.3 Normalized Numbers 34
1.5.4 Precision of Floating-Point Numbers 35
1.5.5 Special Values in IEEE 754 36
1.6 Representing Symbols – Encoding Systems 37
1.6.1 ASCII and ISO 8859 37
1.6.2 Unicode 38
1.6.3 UTF-8 40
1.7 Sounds, Images, and Video 41
1.7.1 Sounds 41
1.7.2 Images 43
1.7.3 Video 46
1.8 Summary of Learning Objectives 46
1.9 References 48

**Chapter 2 Digital Logic 49**

2.1 Boolean Algebra: The Logic of True and False 49
2.2 Truth Tables 50
2.3 Functions of One Variable and the NOT Function 51
2.4 Functions of Two Variables 51
2.5 Boolean Algebra, Switches, and Claude Shannon's Master's Thesis 52
2.5.1 Electric Circuits, Switches, and Transistors 53
2.5.2 Digital Logic Gates 54
2.6 NAND and NOR: Circuit Equivalence and Functional Completeness 56
2.7 Digital Logic Building Blocks: Combinational Circuits 58
2.7.1 Adders 58
2.7.2 Combinational Circuits and Gate Delay 59
2.7.3 Decoders, Multiplexors, and other Building Blocks 60
2.7.4 Shifters 61
2.8 Sequential Circuits and Memory 62
2.8.1 The S-R Latch 62
2.8.2 The Clocked D-latch 63
2.8.3 Edge-Triggered Devices 64
2.9 Clocks and Synchronous Circuits 64
2.10 Registers 65
2.11 Summary of Learning Objectives 66
2.12 References 67

## Chapter 3 The CPU and Memory 69

3.1 The von Neumann Architecture 69
3.1.1 Instruction Set Architecture 71
3.1.2 Microarchitecture 71
3.2 The "Little Man" Computer 72
3.2.1 The Instruction Cycle 72
3.2.2 Programming the Little Man Computer 73
3.2.3 Problems with the Little Man computer 74
3.3 Let's Build a CPU – the Tiny Binary Computer 74
3.3.1 Architecture of the Tiny Binary Computer 74
3.3.2 A One Bit ALU 75
3.3.3 Functions of the ALU 76
3.3.4 Testing the ALU Output 77
3.3.5 The Registers and Datapath 79
3.3.6 The TBC Datapath Cycle 80
3.4 Instruction Formats and Addressing Modes 85
3.4.1 Instruction Formats 85
3.4.2 Addressing Modes 86
3.5 Memory 88
3.5.1 Memory Technology 89
3.5.2 Memory Organization and Addressing 91
3.5.3 Error Detection and Correction 93
3.5.4 Cache Memory 94
3.5.5 Stacks and Stack Pointer 96
3.6 Modern CPU Architecture 98
3.6.1 RISC Computers 100
3.6.2 Hardwired Control Units 101
3.6.3 Pipelined execution 101
3.6.4 Many Registers 102
3.6.5 Superscalar Architecture 103
3.6.6 Multiple Cores 103
3.7 Summary of Learning Objectives 104
3.8 References 105

## Chapter 4 Input and Output 107

4.1 Input and Output Concepts 108
4.1.1 Architecture for Input and Output 108
4.1.2 Interrupts 109
4.1.3 I/O Completion 110
4.1.4 I/O Buses 112

4.2 Storage Devices 117
4.2.1 Hierarchy of Storage Devices 118
4.2.2 Magnetic Disks 119
4.2.3 Solid-State Secondary Storage 123
4.2.4 Redundancy: RAID 125
4.2.5 Optical Drives 128
4.2.6 Magnetic Tape and Near-Line Storage 131
4.3 Other Input and Output Devices 132
4.3.1 Displays 132
4.3.2 Printers 135
4.3.3 Keyboards and Mice 138
4.3.4 Other Devices 139
4.4 Summary of Learning Objectives 139
4.5 References 140

**Chapter 5 Networks and Data Communications 141**

5.1 Messages, Protocols, Channels, and Links 141
5.2 Protocol Stacks and the OSI Model 145
5.2.1 The OSI Model 145
5.3 Ethernet, Local Networks, and the Data Link Layer 146
5.3.1 The Ethernet Data Link Layer 147
5.3.2 Collisions and Switching 148
5.3.3 The Ethernet Physical Layer 150
5.4 The Internet Protocol Suite – TCP/IP 151
5.4.1 The Domain Name System (DNS) 156
5.4.2 IPv4 Addresses and Routing 158
5.4.3 IPv6 Addresses and Routing 162
5.5 Physical Transmission 164
5.5.1 Network Topologies 164
5.5.2 Data Transmission 166
5.6 Summary of Learning Objectives 175
5.7 References 176

**Chapter 6 Software and Programming 179**

6.1 Undecidable and Intractable Problems 179
6.2 Application Software and Software Development 181
6.2.1 Software Engineering 181
6.2.2 Programming Languages 182
6.2.3 Algorithms and Data Structures 184
6.2.4 Structured and Object-Oriented Programming 185

6.2.5 Development Environments and Version Control 187
6.3 Operating Systems 187
6.3.1 Hardware Support and Privileged Instructions 188
6.3.2 Concurrent Operation and Process Scheduling 189
6.3.3 Disk Space and File Management 192
6.3.4 Memory Management and Virtual Memory 195
6.3.5 Virtual Memory 197
6.3.6 Management of Other Resources 201
6.3.7 Tuning and Limits on Throughput 202
6.4 Virtualization 203
6.4.1 Native and Hosted Virtualization 204
6.4.2 Planning for Virtualization 205
6.5 Database Management Systems 206
6.5.1 The Relational Database Model 207
6.5.2 The ACID Properties 209
6.5.3 NoSQL Databases 210
6.6 Summary of Learning Objectives 211
6.7 References 212

**Chapter 7 Information Security 215**

7.1 What Does "Secure" Mean? 215
7.2 Properties of a Secure System 216
7.2.1 Confidentiality 216
7.2.2 Integrity 217
7.2.3 Availability 217
7.2.4 Properties, States, and Controls: the McCumber Model 217
7.2.5 Other "Properties" 218
7.3 Goals of an Information Security Program 218
7.4 Policy, Controls, and Procedures 219
7.5 Assets, Risks, and Risk Management 220
7.5.1 Identifying Assets and Threats 221
7.5.2 Risk Management 221
7.6 Identification, Authentication, and Access Control 222
7.7 Security of Data Communications 225
7.8 Cryptography 226
7.8.1 Symmetric Key Cryptography 227
7.8.2 Asymmetric Key Cryptography and Key Exchange 228
7.8.3 Cryptographic Hashes and Digital Signatures 229
7.9 Summary of Learning Objectives 232
7.10 References 233

**Appendix A Programming LMC / TBC 235**

A.1 Format of Assembly Language Statements 235
A.2 Operation Codes 236
A.3 Extended Operation Codes 238
A.4 Operation 239

**Appendix B Architecture of the Tiny Binary Computer 243**

B.1 Memory 243
B.2 Data Path: Registers and Buses 244
B.3 Arithmetic / Logic Unit 245
B.4 P/Z Latch 246
B.5 Control Unit 246
B.6 Stack 249
B.7 Timing 249
B.8 Input and Output 251
B.9 References 252

**Index 253**
